

## Cast Zinc Shot

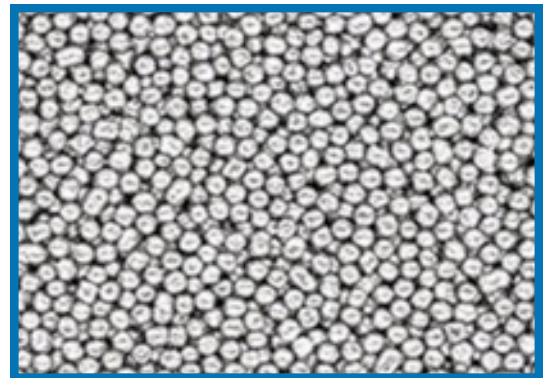

Casted Zinc Shot is used for deburing and cleaning on various Aluminium alloy, Zinc and Magnesium diecastings. Because their specific gravity is close to steel and the hardness is low, the deburing can be performed without wearing the products' surfaces. Otherwise distinguished from Aluminium abrasive, the security is nice for much lower kindng point of the dust. And they are also characterised at obvious whitening on the surfaces of the workpieces.

### Application:

- Blast Clenning
- Deburing

### Blasting method:

- Turbine system shot blasting technology
- Airblast system blasting technology

### Typical physical properties

Hardness	HV 38-55/HV45-60
Shape	Spherical
In more size class	from 0.3 mm to 3 mm m

### Chemical compositon

Fe	0.004 %
Zn	99.99 %
Al	0.003 %
Co	0.002 %
Cu	0.001 %

### Package

25 kg bags on pallet up to 1 ton
